Getting Started

Unlock Jenkins

To ensure Jenkins is securely set up by the administrator, a password has been written to the log ([not sure where to find it?](#)) and this file on the server:

```
/var/lib/jenkins/secrets/initialAdminPassword
```

Please copy the password from either location and paste it below.

Administrator password

Continue

System Configuration

⚙ Configure System

Configure global settings and paths.

🔧 Global Tool Configuration

Configure tools, their locations and automatic installers.

⚙ Manage Plugins

Add, remove, disable or enable plugins that can extend the functionality of Jenkins.

Manage Nodes and Clouds

Add, remove, control and monitor the various nodes that Jenkins runs jobs on.

Security

🔒 Configure Global Security

Secure Jenkins; define who is allowed to access/use the system.

🔑 Manage Credentials

Configure credentials

🔑 Configure Credential Providers

Configure the credential providers and types

Manage Users

Create/delete/modify users that can log in to this Jenkins.

Status Information

📊 System Information

Displays various environmental information to assist trouble-shooting.

📄 System Log

System log captures output from java.util.logging output related to Jenkins.

📈 Load Statistics

Check your resource utilization and see if you need more computers for your builds.

Enter an item name

JenkinsCICDPScript

» Required field

- 

Freestyle project
This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.
- 

Maven project
Build a maven project. Jenkins takes advantage of your POM files and drastically reduces the configuration.
- 

Pipeline
Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.
- 

Multi-configuration project
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.
- 

Folder
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.
- 

Multibranch Pipeline
Creates a set of Pipeline projects according to detected branches in one SCM repository.
- 

Organization Folder
Creates a set of multibranch project subfolders by scanning for repositories.

If you want to create a new item from other existing, you can use this option:

OK from
